

Hyperbaric Oxygen Therapy Halifax

Hyperbaric Oxygen Therapy Halifax - Therapy called oxidative therapy is done by introducing extra energy within the body. The three ways that this can be done is to introduce oxygen into the body under pressure using Hyperbaric Oxygen, by mixing ozone gas in with the blood, or through infusing H₂O₂ or Hydrogen Peroxide in a vein. It just takes a little amount of Hydrogen Peroxide to produce a large amount of oxygen, thus, parts on the body that suffer from poor circulation can benefit very much from the oxygen supply.

Oxidative therapy has been used since the 1920's, when Dr. T.H. Oliver initially used Intravenous Hydrogen Peroxide during an epidemic of influenza. This successful treatment helped many individuals and the outcome were reported in the Lancet, a British medical journal. A few years later, Dr. Charles Farr published a paper entitled "Therapeutic Use of Intravenous Hydrogen Peroxide." This particular paper has become the protocol for physicians who administer H₂O₂.

The theories around this particular therapy vary in its explanation of how this particular treatment works. Several researchers and scientists have discovered that the presence of H₂O₂ within the body is much more complex than initially believed. The benefits of Oxidative Therapy have been show useful for the following health conditions: Cardiovascular Disease, Cerebrovascular Disease, Coronary spasm, Cardiac arrhythmia, Asthma, Peripheral Vascular Disease, Pulmonary Diseases, COPD, Raynaud's Phenomenon, Influenza, Chronic Bronchitis, Bronchiectasis, HIV, Herpes Simplex, Lupus, Immune Disease, Alzheimer's, Multiple Sclerosis, Chronic Fatigue, Fibromyalgia, Environmental Poisonings, Rheumatoid Arthritis, Migraines, and Parkinson's Disease, to name a few.

Because oxidation is a very essential energy producing chemical response in the body which uses various forms of oxygen, the treatment should be carefully controlled so as to prevent damage to surrounding normal tissue. Anti-oxidants in the form of enzymes and vitamins protect the body from oxidative damage. Nonetheless, the immune system makes use of oxidative energy as a weapon in order to directly kill infectious agents such as bacteria, yeast, viruses and parasites.
